

Hemera 120

External Roller Shading

with concealed head box When retracted recesses the blind within the building fabric with an integral lower access plate

Control:

- Solar Gain
- Light Level
- Screen Glare
- Visual Perception
- Thermal Comfort

Function:

- Retractable
- Automatic/Manual
- Durable
- Proven Technology

Description:

Hemera 120 external roller blinds are an effective method of reducing solar gain and when used with a mesh fabric allow outward vision and good light levels. The aluminium top box fits into a recess at the window head and neat side guides or cables retain the weighted bottom bar.

Hemera 120 blinds are motorised with a wall switch or automatically controlled and with links to a Home or Building Management System.

Solar gain reduction, glare control, natural ventilation and good light levels all in one attractive solution.

More info:

The lowest cost energy is the energy that you do not need so preventing overheating and the need for energy use for cooling is more effective than making plant more efficient. Hemera external shading does that, reducing the load from solar gain by up to 90%, a significant cost saving. Stopping the gain before it reaches the glass is more energy efficient than paying to remove it.
